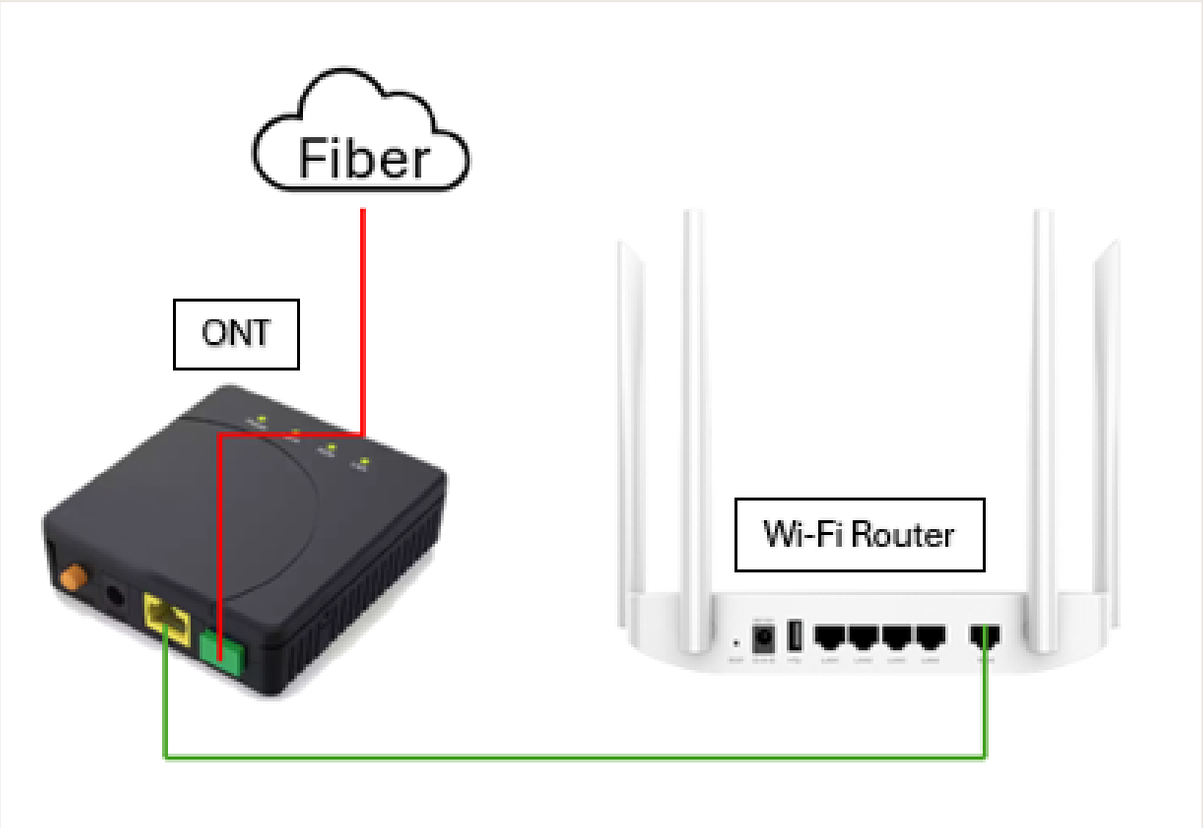
Troubleshooting Guide

Fiber only Product

Overview on the connection between ONT and Wi-Fi Router.



Choose the Broadband Issue You Are Experiencing:

1) Issue 1 – No Internet Connection

Step 1	**Restart (Power Cycle) the ONT and Wi-Fi Router** • Switch off both the ONT and the Wi-Fi router at the power source. • Wait at least **2 minutes** to allow the devices to fully reset. • Then, turn the power back on for both devices.	

Step 2	**Ensure the ONT is connected to the WAN (Internet) port of your Wi-Fi router**
	
	• Use an Ethernet (RJ45) cable to connect the ONT to the router's WAN or Internet port.
	• This port is usually labeled **"WAN"** or **"Internet"** on the back of the router.
	• For proper operation:
	  ○ **Power** and **Wi-Fi** indicators should show solid lights.
	  ○ **WAN** indicator should be flashing, indicating active data transmission.

Issue 2 – Slow Internet Speed

Step 1	**Perform a Speed Test** • Connect your laptop directly to the ONT using an Ethernet cable, or use Wi-Fi (ensure your device is near the router for the best signal). • Open a web browser and go to www.speedtest.net. • Click **"Go"** to start the test. • Run the speed test **three times** to get a more accurate average result.	 
Step 2	**Improve Your Speed if Results Are Unsatisfactory**
	
	• **Disconnect unused devices** from the network and run the speed test again.
	• **Optimize your Wi-Fi router's placement:**
	  ○ Position the router in a **central location**, elevated and free from metal objects or electronic devices.
	  ○ **Avoid placing it near thick walls** or large obstructions, which can block the signal.
	• **Check your Wi-Fi signal strength:**
	  ○ Weak signals can cause slow speeds. Use apps like **Wi-Fi Analyzer** to measure signal strength.
	  ○ If the signal is **weaker than -70 dBm**, move closer to the router or reposition it for better coverage.
